

AI-Driven Development - 30-Day Challenge Task-3

Task 3 – Official Submission

Name: Iqra Ehsan

Class Slot: Friday – 6:00 PM to 9:00 PM

Instructor: Sir Hamzah Syed

1. What new improvements were introduced in Gemini 3.0?

In Gemini 3.0 multimodal capabilities across text, images, audio and video like translating handbooks into interactive cook books, creates dynamic UIs making images by providing prompts, while agentic features via Gemini Agent handle multi-step tasks like inbox organization. With a redesigned interface there is "My Stuff" named folder present in Gemini app. All these features were integrated in app. Currently Gemini 3.0 announced on November 18, 2025 that introduces state-of-the-art reasoning with 50% better performance efficiency.

2. How does Gemini 3.0 improve coding & automation workflows?

Gemini 3.0 improve coding & automation workflows much easier and faster. It works up to 17% better especially with tools like Next.js. It is perfect in coding, error debugging, it runs commands itself, fixes errors and it itself automates and tests validation and verification for our assigned task which we write in prompts and it controls things like Git. Gemini 3.0 codes and fixes things like an expert teammate. Here our role is to write prompts in English and Gemini 3.0 builds the workflow itself.

3. How does Gemini 3.0 improve multimodal understanding?

Gemini 3.0 improves multimodal understanding with granular controls like media resolution and thinking level with mixed inputs for better factual consistency for educational and research applications. (e.g. generating flash cards from lectures). According to research Gemini 3.0 improves 81% on MMMU-Pro for cross subject reasoning and 87.6% on video-MMMU for video knowledge by surpassing Gemini 2.5 Pro 13-20% which is world-leading multimodal performance.

4. Name any two developer tools introduced with Gemini 3.0.

The two developer tools names are

1. Google Anthropic

2. Gemini CLI

1. Google Anthropic

This is an agentic development platform for developers for code, test and run workflows across editors, terminals and browsers.

2. Gemini CLI

It is a CLI tool in this AI era, which is CLI agentic coding tool. This tool is used for automating engineering tasks like debugging and infrastructure management.

PART B — Practical Task (Screenshot) Required

Gemini - Testinig_gemini_cli

> 

Tips for getting started:
1. Ask questions, edit files, or run commands.
2. Be specific for the best results.
3. Create GEMINI.md files to customize your interactions with Gemini.
4. /help for more information.

> /model show

>  Type your message or @path/to/file

~\Desktop\Testinig_gemini_cli

no sandbox (see /docs)

Activate Windows
Go to Settings to activate Windows

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

node +

Great, Python it is. I will now create a file named `mall_auth.py` with a simple command-line authentication system. This will include options to register a new user and log in. The user data will be stored in memory for this example.

```
? WriteFile Writing to mall_auth.py
1 import getpass
2
3 # In-memory user store (for demonstration purposes)
4 # In a real application, you would use a database.
5 user_database = {}
6
7 def register_user():
8     """Registers a new user."""
9     print("--- Register New User ---")
10    username = input("Enter a username: ")
11
12    if username in user_database:
13        print("Username already exists. Please choose another one.")
14        return
15
16    password = getpass.getpass("Enter a password: ")
17    user_database[username] = {"password": password}
18
19 # Waiting for user confirmation...
```
